EM 1110-3-172

Engineer Manual
No. 1110-3-172

11 May 1984

Engineering and Design
DOMESTIC WASTEWATER TREATMENT
Mobilization Construction

	<u>Paragraph</u>	<u>Page</u>
CHAPTER 1. GENERAL		
Purpose and scope.....	1-1	1-1
Overall design considerations...	1-2	1-1
Definitions.....	1-3	1-1
CHAPTER 2. CONSIDERATIONS FOR SITE SELECTION		
Location.....	2-1	2-1
Space requirements.....	2-2	2-1
Access.....	2-3	2-1
CHAPTER 3. TREATMENT REQUIREMENTS		
General considerations.....	3-1	3-1
Evaluation of wastewater treatment processes.....	3-2	3-1
CHAPTER 4. BASIC DESIGN CONSIDERATIONS		
General.....	4-1	4-1
Period of design.....	4-2	4-1
Estimating service demand.....	4-3	4-1
Volume of wastewater.....	4-4	4-2
Wastewater characteristics.....	4-5	4-3
Plant site preparation.....	4-6	4-4
Plant layout.....	4-7	4-4
Plant hydraulics.....	4-8	4-5
Plant auxiliary facilities.....	4-9	4-5
Metering and instrumentation....	4-10	4-6
Sampling.....	4-11	4-6
Standard drawings.....	4-12	4-6
CHAPTER 5. SELECTION OF TREATMENT PROCESSES		
General.....	5-1	5-1
Recommended treatment scheme....	5-2	5-1
Alternative treatment designs...	5-3	5-4
Regulatory requirements.....	5-4	5-4
Impact on receiving waters.....	5-5	5-4

	<u>Paragraph</u>	<u>Page</u>
CHAPTER 6. FLOW-MEASURING DEVICES		
General considerations.....	6-1	6-1
Types of flow-measuring devices.....	6-2	6-1
CHAPTER 7. SCREENING		
General considerations.....	7-1	7-1
Bar screens.....	7-2	7-1
CHAPTER 8. SEDIMENTATION		
General considerations.....	8-1	8-1
Functions and types of sedimentation units.....	8-2	8-1
Design parameters.....	8-3	8-1
Tank types and design features.....	8-4	8-5
Imhoff tanks.....	8-5	8-6
Sludge characteristics.....	8-6	8-6
CHAPTER 9. WASTE STABILIZATION PONDS		
Waste stabilization pond classification.....	9-1	9-1
Design parameters for waste stabilization ponds.....	9-2	9-3
Pond facility requirements.....	9-3	9-4
CHAPTER 10. TRICKLING FILTER PLANTS		
General considerations.....	10-1	10-1
Design basis and criteria.....	10-2	10-1
Nitrification in trickling filters.....	10-3	10-7
Hydraulic components.....	10-4	10-7
Other filter components.....	10-5	10-8
CHAPTER 11. ACTIVATED SLUDGE PLANTS		
General considerations.....	11-1	11-1
Activated sludge processes.....	11-2	11-1
Design basis and criteria.....	11-3	11-5
Methods of aeration.....	11-4	11-6
Aeration tank design.....	11-5	11-10
Final settling tank.....	11-6	11-11
Sludge handling.....	11-7	11-12

	<u>Paragraph</u>	<u>Page</u>
CHAPTER 12. SLUDGE HANDLING, TREATMENT, AND DISPOSAL		
General considerations.....	12-1	12-1
Sludge pumping.....	12-2	12-1
Sludge digestion.....	12-3	12-1
Sludge storage.....	12-4	12-6
Sludge drying.....	12-5	12-7
Sludge disposal.....	12-6	12-7
CHAPTER 13. DISINFECTION		
General considerations.....	13-1	13-1
Types of chemical disinfectants.	13-2	13-1
Design basis and criteria.....	13-3	13-1
Chlorine feeding equipment.....	13-4	13-2
Chlorine contact chambers.....	13-5	13-5
Residual limitations.....	13-6	13-5
CHAPTER 14. SMALL SEWAGE TREATMENT FACILITIES		
General considerations.....	14-1	14-1
Septic tank design factors.....	14-2	14-1
Subsurface irrigation design factors.....	14-3	14-1
Package treatment plants.....	14-4	14-2
CHAPTER 15. SAFETY FEATURES		
General considerations.....	15-1	15-1
Applicable standards.....	15-2	15-1
Safety features in plant design.....	15-3	15-1
Safety equipment.....	15-4	15-2
Quick Shower.....	15-5	15-3
APPENDIX A. SAMPLE PROBLEMS		A-1
APPENDIX B. OXYGEN SOLUBILITY TABLE		B-1
APPENDIX C. REFERENCES		C-1

LIST OF FIGURES

- Figure 5-1. Treatment scheme for flows less than or equal to 0.2 mgd.
5-2. Treatment scheme for flows greater than 0.2 mgd.

- Figure 6-1. Parshall measuring flume.
- 7-1. Schematic of heavy duty mechanically cleaned bar screen.
- 7-2. Estimate of screenings collected on bar screens.
- 8-1. Effective surface area adjustments for inlet-outlet losses in rectangular clarifiers, L:W=4
- 8-2. Effective surface area adjustments for inlet-outlet losses in circular clarifiers.
- 10-1. Common flow diagrams for single and two-stage high-rate trickling filters.
- 10-2. Trickling filter components.
- 11-1. Activated sludge flow diagrams.

LIST OF TABLES

- Table 3-1. Evaluation of wastewater treatment processes.
- 3-2. Approximate performance data for various wastewater processes.
- 3-3. Operational characteristics of various treatment processes.
- 4-1. Sewage characteristics.
- 4-2. Capacity factors.
- 6-1. Types of measuring devices applicable to wastewater treatment.
- 6-2. Parshall flume flow values.
- 7-1. Efficiencies of bar spacing.
- 8-1. Surface loading rates for primary settling tanks.
- 8-2. Surface loading rates for secondary sedimentation tanks.
- 8-3. Typical characteristics of domestic sewage sludge.
- 9-1. Classification and design parameters for wastewater treatment ponds.
- 9-2. Mechanical mixing energy required for oxygen dispersion.
- 9-3. BOD removal efficiencies for aerated wastewater treatment ponds.
- 10-1. Design data and information for trickling filter processes.
- 10-2. Design recirculation rates for high-rate filters.
- 10-3. Miscellaneous trickling filter component design criteria.
- 11-1. Design criteria for activated sludge modifications.
- 11-2. Oxygen and air requirements for activated sludge modifications.
- 11-3. Power requirements for different types of aerators.
- 12-1. Aerobic digestion design parameters.
- 12-2. Standard-rate anaerobic digester capacity design criteria.
- 12-3. High-rate anaerobic digester capacity design criteria.
- 12-4. Area required for sludge drying beds.
- 13-1. Typical chlorine dosages required for sewage disinfection.
